1. Introduction

FAKRNY is a secure and user-friendly password manager for individuals and small businesses.

It helps you store your passwords safely and easily use them when you need.

With FAKRNY , you can finally ditch the sticky notes and remember just one master password.

2. Features and Functionality

Secure Storage: Your passwords are encrypted with industry-standard AES-256 encryption and stored locally on your device.

No data is ever sent to the cloud, ensuring complete privacy and control.

Copy password to Clipboard : Never type a password again! FAKRNY automatically fills in your login credentials on websites and apps, saving you time and effort.

Dark Theme: Enjoy a sleek and eye-friendly dark theme for nighttime use.

3. Getting Started

Download and install FAKRNY on your device.

Create a strong master password and remember it well (this is the only password you will need to remember).

Start adding your existing passwords manually.

4. Security

FAKARNY takes security seriously.

Here are some of the measures we implement:

AES-256 Encryption: Your passwords are encrypted with the same standard used by banks and governments.

ss your passwords in case of an emergency.

5. Troubleshooting and FAQ

For detailed troubleshooting steps and answers to frequently asked questions, please visit our dedicated support page : <https://github.com/Zack-River/FAKARNY>

7. Conclusion

FAKARNY is the password manager you can trust to keep your online life safe and secure. With its powerful features, user-friendly interface, and unwavering commitment to security, FAKARNY makes managing your passwords a breeze. Download it today and experience the peace of mind of knowing your passwords are always protected.

Example from Sign-Up Form

```
private void SignUp_Button_Click(object sender, EventArgs e)
{
    bool fn = false;
    Fullname Check
    string temp_username = ComputeHash(SignUp_Username_Textbox.Text);
    File_ext = Program_path + "\\data\\" + temp_username;
    Username Check
    Password Check
    Confirmation
    if (fn && un && pc && con)
    {
        if (!Directory.Exists(Program_path + "\\data"))
        {
            Directory.CreateDirectory(Program_path + "\\data");
        }
        Directory.CreateDirectory(File_ext);
        using (StreamWriter sw = File.CreateText(File_ext + ".txt"))
        {
            sw.Write(ComputeHash(SignUp_Password_Textbox.Text));
        }
        Directory.CreateDirectory(File_ext + "\\Info");
        using (StreamWriter sw = File.CreateText(File_ext + @"\Info\Info.txt"))
        { sw.WriteLine(SignUp_Fullname_Textbox.Text); }
        MessageBox.Show("Welcome " + SignUp_Fullname_Textbox.Text, "Submmited");
        SignUp_Fullname_Textbox.Text = "Full name";
        SignUp_Username_Textbox.Text = "Username";
        SignUp_Password_Textbox.Text = "Password";
        SignUp_Confirm_Password_Textbox.Text = "Confirm Password";
        this.Close();
    }
}
```
